July 16, 2008

To Whom It May Concern:

CS Construction Inc. has requested that I write this letter describing some of the Intelligent Transportation System work that CS Construction has worked on for the City.

CS Construction has worked on several projects for the City that are strictly ITS in nature. These include the Peoria Sports Complex ITS Workstation and the ADOT FMS Phase 8, 10, 11, and 13, which installed conduit, pull boxes, and fiber for the City.

CS Construction always has provided the City with quality workmanship and product. CS Construction has demonstrated a willingness to provide a working product to the City and has spent a great deal of time in integration of new products to ensure that they provide the City with the intended results.

CS Construction has been responsive and adaptive to problems with vendors, equipment and other constraints that have occurred in projects. They have demonstrated the ability to work through difficult problems and provide a workable solution.

I would recommend CS Construction as a competent contractor for any technological project.

Sincerely,

A handwritten signature in black ink, appearing to read "Steve Blair", written over a light blue horizontal line.

Steve Blair
Traffic Signal System Specialist
